

LM-990A

The Progressive Lensmeter For Progressive Practices.

- Easy progressive-lens measurement
- Automatic PD (monocular and binocular)
- Automatic read
- Automatic prism (real time and net prism)
- Three modes: standard, progressive and contact lens
- User-friendly icons
- Automatic R/L recognition
- Average measuring time of 0.1 second
- Automatic Abbe

The remarkable new LM-990A Automatic Lensmeter makes measuring progressive lenses easier and faster than ever. But that's just one of the ways it makes your practice more efficient—automatically.

The LM-990A is a complete automatic lensmeter. It measures monocular and binocular PD automatically. It can even measure your most difficult lenses, including progressives, prisms and high-index lenses with ease.

With a built-in thermosensitive printer and an average measuring time of 0.1 second, the LM-990A offers time savings as well as a space-saving compact design.

Perhaps best of all, the LM-990A is so simple to use, technicians can become competent with less than an hour's training.

In short, the LM-990A is another example of what you have come to expect from Marco, simply the best in automation—and now we deliver again.
